Professional Summary

Software engineer with 3+ years of combined full-time and internship experience building large-scale distributed systems, including 2+ years on LinkedIn's Trust Engineering (Login and Account Access) team supporting authentication infrastructure for 1B+ members. Experienced in service decomposition, high-availability systems, distributed data pipelines, and end-to-end ownership of production systems, with measurable impact across reliability, performance, and operational efficiency.

Technical Skills

Languages: Java, Python, C/C++, JavaScript, Kotlin, KustoQL, GraphQL
Frameworks & Tools: Spring Boot, gRPC, REST.li, Guice, Docker, Kubernetes, Grafana, CI/CD, Jenkins
Data & Distributed Systems: Kafka, Spark, Hadoop, Hive, Samza, Flink/Beam, SQL, Postgres, MongoDB
AI & GenAI: LLMs, AI Agents, Prompt Engineering, Claude CLI, Ollama, GPT, Gemini
Security, Cloud & Architecture: OAuth, KMS, AEAD, Azure, Protocol Buffers, SDUI, DevOps, Governance

Experience

LinkedIn *Bengaluru, India*

Software Development Engineer – Trust Engineering (Account Access) *Jul 2024 – Jul 2026*

- Contributed to the login monolith migration for systems serving **1B+ members** through HLD/LLD design, architecture reviews, and security testing; drove service decomposition and established Jenkins-based CI/CD, improving availability to **99.99%**.
- Led the remember-me cookie encryption migration for **10M+ daily logins**, implementing **AES-GCM-256** with zero-downtime rollout, dual-read fallback, and key versioning to support future key rotation.
- Implemented challenge-based verification in the password reset flow for Google-auth users during an account takeover (ATO) war-room, reducing ATO occurrences by **87%** across workflows affecting **20K+ users/day**.
- Owned the Login SDUI migration across Kotlin backend and JavaScript frontend, building **5+ authentication experiences** using GraphQL and cross-service API integrations, reducing code duplication by **40%**.
- Migrated an enterprise authentication event pipeline from Apache Samza to Flink/Beam on Kafka, using migration-validation pipelines to achieve **zero data loss**.
- Built an AI-powered PR review workflow using Claude Code and a CLAUDE.md context layer, reducing PR push-to-review time from **2–3 hours to ∼10 minutes**.

Software Development Engineer Intern – Trust Engineering (Account Access) *Jul 2023 – Oct 2023*

- Developed and maintained backend services in **Java** and **Scala** for the Authentication and Authorization team, designing RESTful APIs and data access layers backed by **Oracle SQL** and NoSQL databases to support secure login and identity workflows.
- Led a Bulk Upload data migration for 500M+ accounts using Spark and Hive on Hadoop, optimizing database calls to reduce Read CUs by 23% and QPS by 20%, contributing to infrastructure savings of ∼$50K/year.

Maachao Technologies

Founding Engineer *Jan 2022 – Jan 2023*

- Contributed to secure development practices during the product build, aligning engineering work with **ISO/IEC 27001**-informed secure SDLC principles across frontend and backend code.
- Implemented identity and access management using **JWT**-based authentication, **bcrypt** password hashing, and session authorization, with **HttpOnly** cookies and **TLS** transport to protect credentials.
- Supported data-protection practices for user data across the application, including access control and input validation on backend endpoints built with **FastAPI** and **MongoDB**.

Projects

SpecGuard – Enterprise Engineering Governance Platform

- Built a policy-as-code platform that evaluates API specifications, database migrations, container configurations, and infrastructure code against organizational security and governance controls on every PR, enabling continuous compliance before deployment.
- Implemented the backend in Java, Spring Boot, and PostgreSQL with oasdiff for API contract analysis, a TypeScript dashboard for repository risk scoring, HMAC-SHA256 webhook verification, and Docker-based deployment.

Alert Metrics Automation Assistant (LinkedIn Internal Tool)

- Built a Python-based Claude Plugin to analyze 2,000+ alerts across 100+ services, detecting 200+ misconfigured alerts, missing metric coverage, and incorrect ownership across business and dependency monitoring.
- Automated a 6-step GitHub Actions workflow to scaffold, analyze, configure, validate, and dashboard alerts from YAML definitions; adopted by 10+ engineering teams, enabling detection of dependency failures in under 2 minutes.

Education

Techno Main Salt Lake 2020 – 2024

Bachelor of Technology in Computer Science Engineering (CGPA: 8.99/10)

Achievements

- ACM-ICPC Asia-West Regionalist: Rank 27 (Kanpur-Mathura) and Rank 39 (Amritapuri-Bangalore) Regionals.
- Mentored 500+ students across India in Data Structures and Algorithms; solved 1500+ competitive programming problems.
